Abstract (limité à 150 mots)	Through several European and National projects (SPICOSA, VALMER, EFESE, ReponSEAbLe) and in different coastal and marine study sites, we have developed SYNOPSIS platforms for knowledge sharing and collaborative assessments. Each SYNOPSIS platform addresses a policy issue identified with stakeholders and is organised around four axes: hierarchically structured syntheses of knowledge, conceptual mapping of the system, assessments and scenarios narratives. The platforms are co-constructed with local managers, State practitioners and/or stakeholders through meetings and workshops. The policy issues range from freshwater mitigation between watershed farmers and coastal shellfish farmers, microbiological and heavy metal contaminations, seagrass meadows conservation to national ecosystem services assessment or ocean sustainability literacy. For each, we test assessment frameworks like ecosystem services or DPSIR (Driver – Pressure – State – Impact – Response) and explore how these approaches can be complementary and how the SYNOPSIS participatory tools and methodologies foster science and policy integration.
