Abstract (limited to 150 words)	To be valuable for environmental policy and practice, evidence syntheses must address relevant questions, and their findings need to be recognised as legitimate evidence. To increase their relevance and uptake, and according to CEE guidelines, systematic evidence syntheses should be planned with the help and engagement of stakeholders, i.e. organisations and individuals that may be affected by, or for other reasons have an interest in the findings of a particular evidence synthesis. We present a five-step approach to stakeholder engagement in prioritisation and planning of environmental evidence syntheses used by Mistra Council for Evidence-based Environmental Management (EviEM). The approach includes: 1) stakeholder identification; 2) identification of policy- and practice-relevant topics; 3) prioritisation of review questions; 4) establishment of the specific scope of a review; and 5) a public review of a draft review protocol. Challenges and valuable lessons learnt from the engagement process will be discussed.
